

LegalEase: AI-Powered Legal Document Generator

Brainstorming, Idea Generation & Prioritization

Project Phase	1. Ideation Phase
Team	Team 3
Date	02 October 2026
Prepared From	Supplied LegalEase repository + supplied project templates

Step 1 — Team gathering and problem selection

Selected problem: users need a faster way to turn basic legal-document inputs into a structured first draft that can be exported as a formal document.

Step 2 — Brainstormed directions

Idea	Description	Decision
Template library	Predefined documents with editable fields	Useful baseline; limited flexibility
Rule-based generator	Assemble clauses from deterministic rules	Predictable but difficult to expand
AI drafting assistant	Use Gemini to transform structured inputs into legal-style clauses	Selected in current implementation
Document formatter	Render generated text to DOCX/PDF	Implemented
Legal Q&A chatbot	Conversational legal questions	Outside current scope

Step 3 — Prioritization criteria

Criterion	Reason
Implementation fit	Must match the existing FastAPI + Streamlit repository
User value	Should reduce drafting and formatting effort
Feasibility	Should fit the existing Gemini integration
Safety	Generated content should remain a draft requiring review

Source basis: Implemented claims are based on the supplied LegalEase repository. Items without repository evidence are explicitly marked pending, future, or not implemented.
