

# LegalEase: AI-Powered Legal Document Generator

## Proposed Solution

|               |                                                            |
|---------------|------------------------------------------------------------|
| Project Phase | 3. Project Design Phase                                    |
| Team          | Team 3                                                     |
| Date          | 02 October 2026                                            |
| Prepared From | Supplied LegalEase repository + supplied project templates |

| Parameter                             | Description                                                                                                                                                              |
|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Problem Statement                     | Users may know the facts and terms but lack time or drafting expertise to turn them into a structured first draft.                                                       |
| Idea / Solution                       | LegalEase collects type, parties, terms and dates, sends them to Gemini through FastAPI, previews the result and exports DOCX/PDF.                                       |
| Novelty / Uniqueness                  | Combines guided minimal-input collection, document-type-specific Gemini guidance and immediate document export in one lightweight workflow.                              |
| Social Impact / Customer Satisfaction | Reduces repetitive drafting and formatting work and provides a clearer starting point for review. It is a drafting aid, not a replacement for professional legal advice. |
| Business Model                        | Potential future freemium, team/institution plans, workflow integrations or review partnerships; no monetization is implemented.                                         |
| Scalability                           | FastAPI separation, configurable model and export layer support later deployment and scaling.                                                                            |

**Source basis:** Implemented claims are based on the supplied LegalEase repository. Items without repository evidence are explicitly marked pending, future, or not implemented.
